The rat genome contains two nonallelic genes which are similarly expressed and produce very similar end products for preproinsulin. They differ from each other by two AAs in the B-chain and by two AAs in the C-peptide. The coding region of the rat insulin II sequence contains two intervening sequences, the first of which is also found in rat insulin I. The homology extends to about 500 nucleotides upstream of the cap sites, but diverge extensively immediately downstream of their poly-A sites.

In a personal communication, S.Chan [4] noted that the 5' end of the sequence in fig. 5 of [2] is incorrect; hence we have only included the bases 3' to this area.

A TATA box is located at positions 909-914, and a poly-A signal at 1980-1985.

Isolated nucleic acid having expression vector construct with vascular endothelial growth factor-2 insert, useful for treating chronic limb ischaemia or myocardial ischaemia, autoimmune disorders and allergic conditions

Disclosure, Fig 31; 241pp, English.

The invention relates to an isolated nucleic acid comprising pVGI.1 expression vector construct containing the vascular endothelial growth factor 2 (VEGP-2) insert. The nucleic acid is useful for producing a host cell by transducing, transforming or transfecting a host cell by transducing, transforming or transfecting a host cell with the MDM, and for treating a pattent having chronic limb ischaemia or myocardial ischaemia, or a disease or disorder selected from autoimmune disorders (e.g. rheumatoid arthritis, dermatitis), allergic reactions or conditions (e.g. asthma), organ rejection, inflammatory conditions (e.g. cond:), hyperproliferative disorders (e.g. Gaucher's disease), diseases due to viral, bacterial, fungal or parasitic infection, diseases us alsorders (e.g. cardiomyopathy), arthythmia, heart valve diseases, aneurysms, arterial occlusive disorders and embolism. IFN-gamma is a therapeutically active agent in the treatment of autoimmune disease, allograft transplant rejections, wultiple sclerosis, chronic inflammations and delayed hypersensitivity. It is also useful in identifying IFN-gamma agonists and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          pDIP/PyCSP.1 plasmid; malaria vaccine; circumsporozoite protein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        410
                                                                                                                                                                                                                                                                                 The present sequence is the plasmid vector pDIP/PyCSP.1. The vector comprises a gene encoding Plasmodium yoelli dircumsporosoite protein (PyCSP), operably linked to prometer from Cytomegalovirus (CMV.IE). The expression of the CSP gene results in the production of an immune response to the malaria protein and a reduction in malaria parasites at the pre-erythrocytic, erythrocytic, and gametocyte stages of infection. The present sequence can therefore be used as a malaria vaccine. The present sequence has human and rat components also: partial human IL-2 sequence and partial rat preproinsulin II sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       530

                                                                                                                                                                                                                                                                                                                                                                                                                                                      This is the DNA sequence of baculovirus transfer vector pVL1393.
A claimed baculovirus transfer vector incorporates a nucleic acid (see AAT97899-901, AAT97910, AAT97915 and AAT97919) that encodes a recombinant protein in which the A and B chains of a ricin-like toxin are linked by a heterologus linker peptide (see AAM96880-86) that contains a cleavage recognition site for a retroviral protease such as HIV, HTLV-1 or HTLV-1. The vector provides expression of the recombinant proteins in Sf9 insect cells. The recombinant proteins can be used to selectively inhibit or destroy mammalian cells infected with a retrovirus, such as cancer cells associated with HIV or cells associated with HIV. The recombinant proteins are non-toxic until the ricin A chain is liberated from the B chain by the retroviral protease, and thus can be used to specifically target infected cells without the need for a cell binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    831 ACATTAATTGCGTTGCGCTCACTGCCCGCTTTCCAGTCGGGAAACCTGTCGTGCCAGCTG 890

The present invention describes new purified and isolated nucleic acids (II) and anoding: (I) the A and B chains of a ricin-like toxin (II); and (II); and chains linker, joining the two chains and including a cleavage recognition site for a disease-specific protease (III). Also described are: (I) plasmids or baculovirus transfer vectors that contains (I); and (2) recombinant protein (IV) consisting of the A and B Chains of (II) in host cells, are used to inhibit or kill diseased cells that produce (III), particularly for treating cancers (e.g. leucocyte produce (III), particularly for treating cancers (e.g. leucocyte produce (III), particularly for treating cancers (e.g. leucocyte produce (III), particularly for treating cancers (IV) constants or viruses (e.g. infections caused by fungi, parasites (e.g. nalazia) or viruses (e.g. infections caused by though parasites (e.g. nalazia) or viruses (e.g. infections caused by ting), is used to express and multiple solionyelitis or varicella zoster), also cystic fibrosis and multiple calcincity on a cell-binding component. When used to treat viruses component in from endoplasmic reticulum to cytoplasm (which some seption to avoid immune detection), so eslectivity and safety are further improved. (IV) are not toxic until chain A is released and this occurs only in target cells. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    7002 accraarcarcarcaraccrerrrecrereraaarrerrarcecreacaarrecaear

This sequence is a fragment of the pUC 18 nucleotide sequence. The fragments is used in the course of the invention. The invention relates to pyrrole derivatives which recognise a specific DNA base sequence, and strongly bind to the adjacent base via a covalent bond. The pyrrole derivatives alkylate the base sequence, once it has been recognised. The invention also relates to an agent (made from the pyrrole derivatives) for alkylating genes, a process for producing an agent for alkylating genes, and a method for regulating the expression of a gene with a part containing the specific base sequence comprising using an alkylating agent. The compounds are useful in drug compositions for regulating expression of a gene carrying a base sequence which can be recognized then alkylated by them, e.g. in treatment of cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pyrrole derivative; DUC 18; alkylating agent; gene expression regulator; treatment; drug; cancer; ds.

(I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. AAAB1453 to AAAB2114 represent specifically claimed Neisseria meningitidis genomic DNA sequences, AAAB1260 to AAAB1303 and AAB25620 to AAB2563 represent Neisseria DNA sequences and their corresponding proteins; AAAB1254 to AAAB1259 and AAAB1304 to AAAB1321 represent PCR primers used in the isolation of Neisseria meningitidis DNA sequences; and AAAB1322 to AAAB1252 special second because of Neisseria meningitidis Memb Polymucleoride ORF sequences, which are all used in the exemplification of the present invention. The nucleic acid sequences, protein sequences, and antibodies

composition can be used in the manufacture of a composition. The composition can be used as a medicament (or in the manufacture of a medicament) for treating, preventing or diagnosing infection due to composition due to be reserved by acteria. For example, some of the identified proteins could be components of vaccines against Meningococus B; against all serotypes; and/or against all pathogenic Neissariae. Identification of sequences of components and last of actilitate production of biological probes, particularly organism specific probes. Attempts to make efficacious Meningococus B vaccines have failed mainly due to antigen tolerance. Multivalent vaccines have also been tried but none have successfully overcome antigenic variability. The provision of further, complete sequence may provide an opportunity to identify secreted or surface exposed proteins that may be presumed targets for the immune system and which are not antigenically variable or at least more conserved than
                                                                                                                                                                                                                                                                                                                                                                         0

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              831

The present invention describes immunogenic portions of lung tumourassociated proteins (I) and the nucleic acids (NAs) that encode them.

(I) have cytostatic activity and can be used in gene therapy, antisense inhibition and in vaccines. The NAs and the lung tumourassociated to proteins they encode may be used in the prevention, treatment and proteins they encode may be used in the prevention, treatment and chagnosis of diseases associated with their inappropriate expression, especially lung cancers. For example, the NAs may be administered to creat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of the protein by expressing inactive proteins or to supplement the patients own production of (I). Additionally, the NAs may be used to produce the lung-tumour associated protein, according to standard recombinant DNA methodology. Conversely, antisense NAs may be used to produce the lung-tumour associated protein and complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar NA sequences in cancer. The (I) may be used as antisens in the production of antibodies and in assays to identify modulators (agoniets and antagonists) of the expression and activity of the protein. AAF68083 to AAF68878 and AAB768878 represent human lung tumour protein related

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention describes an isolated polynucleotide and polypeptide useful for stimulating and/or expanding T cells specific for a tumour protein for determining the presence of a cancer in a patient. A composition containing the polynucleotide and/or polypeptide is useful for treating a lung cancer in a patient. The polypeptide is useful for tremoving tumour cells from a biological sample. The polynucleotide is also useful as probe or parimer to detect the level of mRNA encoding a tumour protein fragment, described in the method of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          712 CGTAATCATGGTCATAGCTGTTTCCTGTGAAATTGTTATCCGCTCACAATTCCCACACA

The invention relates to a polynucleotide encoding a lung tumour protein, comprising a sequence selected from any of the 14 sequences mentioned in the specification, or a sequence ($2) mentioned in perintial of at least 20 mentioned in complement of $1, sequences consisting of at least 20 contiguous residues of $1, sequences that hybridise to $1, sequences that hybridise to $1, sequences on a sequence that hybridise to $1, sequences on a sequence for a printial and the sequence sequence from any one of the 4 amino acid sequences mentioned in the specification, a sequence encoded by the polynucleotide, or sequence specification, a sequence encoded by the polynucleotide, or sequence of a polynucleotide, or sequence of a polynucleotide, or sequence of a polynucleotide, or sequence of a cancer in a patient, a host cell transformed or transfected with the vector, an isolated antibody (or its antigen-binding fragment) that specifically binds to the polypeptide, detecting the presence of a cancer in a patient, a fusion protein comprising the polypeptide, an oligonucleotide that hybridises to $1 under moderately stringent conditions, stimulating and/or expanding T cells with

The invention describes an isolated polynucleotide comprising one of 32 sequences, complement or degenerate variants of them. The polynucleotide is useful for preparing a composition e.g. a vaccine or for gene therapy, for treating or inhibiting development of cancer, e.g. lung cancer. This sequence represents a polynucleotide associated with the compositions and methods for the therapy and diagnosis of lung cancer.
                                                                                                                                                                                                                                                                                                                                         96

Method for determining open reading frames of the genome of an organism using primers at low stringency conditions, useful in the construction of contigs or constructs of sequenced nucleic acid molecules -
                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is a cDNA sequence obtained using a method for determining open reading frames (ORFS) of the genome of an organism. An aliquot of mRNA from human breast cancer cells was mixed with a single, arbitrary primer, Moloney murine leukaemia virus reverse transcriptase, reverse transcriptase buffer and GNTPs. The mixture was incubated under low stringency conditions to yield single stranded CDNA. The same primer was then used to amplify the cDNA by PCR. Rather than providing nucleotide sequence information from the non-coding the more interesting and relevant internal portions, such as ORFS. The method also permits the construction of contigs of sequenced nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     carraarracerrececreececececrerececreececrerecececerece

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         129
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        891
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             frames (ORFS) of the genome of an organism comprising contacting messenger RNA from a cell of the organism with a single, oligonucleotide primer at low stringency. The method is an improved ORBSTS sequencing method. The methods of the present invention are useful for sequencing of, essentially, the entire coding component of an organism, identification of previously unknown nucleic acid molecules, assigning previously identified nucleocide sequences to internal regions of genes and population studies that identify genes associated with diseases such as heart disease, bronchits, Alzheimer's disease, autoimmune diseases and congenital diseases. This polynucleotide represents a DNA sequence that is used in the novel method of the invention.

Patent No. 6015668

GENERAL INFORMATION:
APPLICANT: Hughes, A. John
APPLICANT: Charterjee, Deb K.
TILE OF INVENTION: Cloned DNA Polymerases from Thermotoga and NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:
ADDRESSEE: STERNE, KESSLER, GOLDSTEIN & FOX, P.L.L.C.
STREET: 1100 New York Ave., N.W., Suite 600
CITY, Machington
                                                                                                                                      325 CCTCGCTCACTGACTCGCTGCGCTCGTCGTTCGGCTGCGGCGGTA 374
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COMPUTER READABLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 3110

Library constructed by N. Garrett, E. ellefroid, and A.M. Zorn
(Wellcome/CRC Institute). DNA Sequencing by: Washington University
Genome Sequencing Center
Clone distribution: Xenopus clones from this library are available
through the I.M.A.G.E. Conscrtium/LLNL at: info@image.llnl.gov
Seq primer: -40RP from Gibco
High quality sequence stops: 273.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /Organizem= Areacyces raceres
